Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/972,996	Applicant(s) FUJII ET AL.	
	Examiner Dmitry Brant	Art Unit 2655	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10/5/01.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-32 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-32 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2, 5-9, 14, 15-16, 19-23, 29-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Thelen et al. (6,487,534 filed 3/23/00)

The table below summarizes the limitations of this application and the corresponding parts of Thelen et al. which read on these limitations.

Claim#	Limitations	Thelen et al.
1, 15	<p>A speech recognition system in which a client and a device that provides a speech recognition process are connected, and which provides a plurality of usable speech recognition means to the client, comprising:</p> <p>speech input means for inputting speech at the client</p> <p>designation means for designating one of the plurality of usable speech recognition means</p>	<p>Client + plurality of servers (Col. 2, lines 32-43 and FIG. 6)</p> <p>(inherent for speech reception of speech input signal, 740, FIG. 7 or 331, FIG. 3)</p> <p>speech controller and switch direct speech input signal to server stations (Col. 2, lines 32-43, and elems. 335-6, FIG. 3)</p>

Art Unit: 2655

	and processing means for making the speech recognition means designated by said designation means recognize speech input from said speech input means.	recognition on the server (314, FIG. 3)
2, 16	<p>The system according to claim 1, wherein said designation means comprises:</p> <p>detection means for detecting designation information used to designate one of the plurality of usable speech recognition means from the speech input by said speech input means, and</p> <p>said designation means designates one of the plurality of usable speech recognition means on the basis of the designation information detected by said detection means.</p>	<p>Local recognizer parses user's commands (334, FIG. 3 and Col. 2, lines 40-43)</p> <p>Controller performs selection of the server and the routing of speech data to that server (335, FIG. 3 and Col. 2, lines 40-43)</p>
5, 19	The system according to claim 1, wherein each of said plurality of usable speech recognition means is capable of converting data format of speech input by said speech input means into a speech data format that can be recognized by speech recognition processing when the data format of the speech input by said speech input means is different from the speech data format.	Speech recognition systems inherently convert the format of input speech into a different data format used for speech recognition (A/D conversion, framing, filtering, feature vectors, etc.) (Col. 4, 14-28)
6, 20	<p>A speech recognition system in which a client and a plurality of devices that provide a speech recognition process are connected, wherein the client comprises:</p> <p>speech input means for inputting speech</p> <p>designation means for designating one of the plurality of speech recognition process,</p> <p>wherein said system comprises processing means for making a speech recognition process provided by a device designated by said designation means, recognize the speech input from said speech input means.</p>	<p>Client + plurality of servers (Col. 2, lines 32-43 and FIG. 6)</p> <p>(inherent for speech reception of speech input signal, 740, FIG. 7 or 331, FIG. 3)</p> <p>speech controller and switch direct speech input signal to server stations (Col. 2, lines 32-43, and elems. 335-6, FIG. 3)</p> <p>recognition on the server (314, FIG. 3)</p>

7, 21	<p>The system according to claim 6, wherein said client farther comprises detection means for detecting speech corresponding to designation information used to designate one of the plurality of usable speech recognition means, from the speech input by said speech input means,</p> <p>wherein said designation means converts the speech detected by said detection means into designation information by using a speech recognition on the client, and designates one of the plurality of said speech recognition means on the basis of the converted designation information.</p>	<p>Local recognizer parses user's commands: "Select Philips, " (334, FIG. 3 and Col. 2, lines 40-43). Speech recognizer is inherently built to detect speech.</p> <p>Local recognizer/controller performs selection of the server and the routing of speech data to that server (335, FIG. 3 and Col. 2, lines 40-43)</p>
8, 22, 29, 31	<p>A client in a speech recognition system to which a device that provides a speech recognition process is connected, and which provides a plurality of usable speech recognition means, comprising:</p> <p>speech input means for inputting speech</p> <p>and designation means for designating one of the plurality of usable speech recognition means</p> <p>and processing means for making the speech recognition means designated by said designation means recognize speech input from said speech input means.</p>	<p>Client + plurality of servers (Col. 2, lines 32-43 and FIG. 6). Client computers necessarily contain storage mediums (RAM, hard disks, etc.) + software.</p> <p>(inherent for speech reception of speech input signal, 740, FIG. 7 or 331, FIG. 3)</p> <p>speech controller and switch direct speech input signal to server-stations (Col. 2, lines 32-43, and elems. 335-6, FIG. 3)</p> <p>recognition on the server (314, FIG. 3)</p>
9, 23	<p>The client according to claim 8, wherein said designation means comprises:</p> <p>detection means for detecting designation information used to designate one of the plurality of usable speech recognition means from the speech input by said speech input means, and</p>	<p>Local recognizer parses user's commands: "Select Philips, " (334, FIG. 3 and Col. 2, lines 40-43). Speech recognizer is inherently built to detect speech.</p>

Art Unit: 2655

	said designation means designates one of the plurality of usable speech recognition means on the basis of the designation information detected by said detection means.	Local recognizer/controller performs selection of the server and the routing of speech data to that server (335, FIG. 3 and Col. 2, lines 40-43)
14, 28, 30, 32	<p>A server which is connected to a client via a network, and provides a plurality of usable speech recognition means to the client, comprising:</p> <p>providing means for providing a designation operation environment that allows the client to designate one of the plurality of usable speech recognition means</p> <p>and processing means for making the speech recognition means designated by said providing means recognize speech received via the network.</p>	<p>(servers necessarily contain storage mediums + software (RAM, hard disks, etc.))</p> <p>Web page containing advertising banners of different companies, having their own recognition servers (Col. 2, lines 36-40). Either the whole web-page or specific banners read on the "providing means for providing a designation operation."</p> <p>Speech recognizer on a dedicated SR server (314, FIG. 3)</p>

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-4, 10-13, 17-18, 24-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thelen et al.

Art Unit: 2655

As per claims 3, 11, 13, 17, 25, 27, Thelen et al. do not disclose "GUI input means for designating one of the plurality of usable speech recognition means via graphical user interface."

However, Thelen et al. disclose the use of a web page containing advertising banners of different companies, each company having its own recognition servers (Col. 2, lines 36-40). The users select the banner by saying the banner's name, tag name, etc. (Col. 2, lines 45-48). The examiner takes the official notice that it is extremely well-known in the art to navigate web pages using GUI by clicking on the banner using a standard IO device, such as a computer mouse.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Thelen et al. to choose recognition servers by using a standard GUI to select the associated banners (by clicking on them, for example), as this is the most well-known and universally accepted method of navigating web pages, and would allow the users to browse the "speech recognition" web pages in a way identical to browsing the "regular" web pages.

As per claims 4, 12, 18, 26, Thelen et al. discloses receiving input speech (740, FIG. 7) but do not explicitly disclose using "plurality of speech input means."

However, the examiner takes the official notice that input systems with multiple microphones (such as microphone arrays) are notoriously well-known in the art and are used in a variety of systems adapted for noisy or spatially large environments (conference rooms, car SR, home entertainment systems, etc.).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Thelen et al. to use multiple speech input means (microphones), as such arrangement is very well-known in the art, and would allow the users of Thelen et al.'s system to improve the reception of speech signal in noisy or spatially large environments (conference rooms, etc.)

As per claims 10, 24, Thelen et al. do not disclose a situation "when said detection means does not detect any designation information, said processing means recognizes the speech input from said speech input means without using the plurality of speech recognition means."

However, Thelen et al. disclose an embodiment where a local recognizer is used to identify a "routing command" and direct the speech signal to the appropriate server (Col. 9, lines 4-16). In other words, a local recognizer does recognize input speech, but if the routing command was not present in the table or was not specified by a user (Col. 9, lines 5-10), then the client station would not be able to contact the SR server for the further speech recognition. Hence, assuming that no default SR server is specified, whenever the client cannot resolve the destination server, all the speech processing must be either performed directly on the client using a limited speech recognizer (334, FIG. 3) or aborted altogether. Since the latter option is not useful, the limited speech recognizer on the client is the only viable device that can perform speech recognition in

Art Unit: 2655

the situation described above or when small commands are used for operation of the client's workstation (Col.8, lines 49-60)

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Thelen et al. to use a local recognizer as a back-up option whenever the remote server is not specified in order to provide the user with some speech recognition capability instead of aborting the transaction altogether. This would improve the overall usability of the system and would work particularly well in situations where the small commands are used in operation of the client's workstation (Col.8, lines 49-60)

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Thelen et al. (6,526,380) teach a system with multiple parallel recognizers.

White et al. (6,408,272) teach a distributed voice recognition system.

Joost (6,327,568) teaches a distributed voice recognition system.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dmitry Brant whose telephone number is (703) 305-8954. The examiner can normally be reached on Mon. - Fri. (8:30am - 5pm).

Art Unit: 2655

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Talivaldis Ivars Smits can be reached on (703) 306-3011. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to Tech Center 2600 receptionist whose telephone number is (703) 305- 4700.
